New Wood Grain (NWG) Composite is a revolutionary product to traditional WPC or Co-extrusion WPC. The embossing process didn't come from 'thermo print' but 'pressure print' so this wood grain can stay at least 8-10 years. This product keeps plastic crust so the surface is more hard and absorb less water. scratch will not work on the surface because of the hard surface, water/ oil/ wine stain will not stay on the surface as well.
